Mizner Bioscience Introduces the First Veterinary-labeled Phenobarbital for Dogs

BOCA RATON, FL. – (July 19, 2021) –Mizner Bioscience and Clipper Distributing are excited to announce the launch of Nobatol, the first and only veterinary-labeled phenobarbital indicated for the prevention of seizures due to generalized epilepsy in dogs. Nobatol comes in a scored, all-natural beef-flavored soft chewable tablet to enhance palatability and ensure accurate dosing. Available in 30 and 60 mg, 60-count sealed bottles, Nobatol offers convenient in-house dispensing and saves staff time by eliminating the hassle of counting and scoring pills in clinic.

As the number one prescribed medication for idiopathic epilepsy in dogs, veterinarians prescribe approximately 140 million tablets of phenobarbital annually. Mizner and Clipper believe Nobatol will have a positive impact on the animal health industry, providing veterinarians with a convenient, palatable vet-labeled phenobarbital option.

Mizner Bioscience, a privately held drug manufacturer headquartered in Boca Raton, Fla., focuses on the development of generic drugs for dogs, cats and horses. Clipper Distributing is a master distributor helping manufacturers bring new products to market through sales, marketing and logistics.

Nobatol is available through animal health distributors. For more information on Nobatol, please visit nobatol.miznerbioscience.com.
